

Custom solutions

# **A chatbot is only the front door.**

The real value is the system behind the  
conversation.

Behind the chat

# The system needs to understand context.

- Products, prices and policies
  - Order status and customer history
  - Escalation rules and team ownership
-

The action layer

# Good AI does not stop at answering.

It creates tasks, updates tools, notifies the right person and logs what happened.

**Answering is useful. Acting in the workflow is where leverage starts.**

**Human control**

# The human should not disappear.

**01**

**Auto-handle repeat questions**

**02**

**Flag edge cases for review**

**03**

**Ask approval before risky actions**

**04**

**Keep a clean activity log**

Takeaway

# **Do not build a bot. Build the workflow behind it.**

That is the difference between a feature and a business system.
